All students have the capacity to learn and become cooperative, respectful, and independent citizens, and to achieve success through active participation in and commitment to a challenging and stimulating curriculum.

Students learn best through inquiry-based, hands-on academic programs that set high expectations, offer a balanced curriculum, and include a variety of teaching styles, as well as differentiated instruction.

Integrating math, science, and technology enhances instruction across the curriculum and grade levels.

Teamwork among staff, students, and parents promotes development of leadership qualities, offers assistance to students approaching mastery, and includes all in a constructive way.

Character and social skills are developed and promoted through daily modeling of respect, conflict resolution, and personal responsibility.

Parents and community must actively participate in and support our educational program at school and at home.
